Time To Replace Your Water Meter

To ensure your water meter is reading accurately, Aquarion is required to periodically test your water meter at no charge.

If you have been notified that you're due for a meter replacement, please be sure to schedule an appointment right away. Scheduling an appointment is easy, just log into the Aquarion portal at aquarionwater.com/my-account or call our Customer Service Center at 1-800-732-9678.

Replacement takes approximately 30 minutes. Please remember, we will not request entry into your home without an appointment. Aquarion representatives always carry company-issued photo identification.

Did You Know?

You can learn more about your drinking water in our latest Water Quality Report for your community. Check it out at aquarionwater.com/wqr.

Drought Conditions Bring Outdoor Water Restrictions

Quick — how has the dry weather this year changed the rules for when and how you can use water outdoors?

If you can't answer that, you only need to go to Aquarion's website to learn about mandatory conservation measures on outdoor water use in your town.

The restrictions focus on outdoor water use, which on average can be more than 40% of a home's water use. That not only jeopardizes the amount of water available for people to drink and firefighters to use in battling blazes.

Conditions change, so be sure you're up-to-date on the mandatory restrictions in your town. You'll find them at aquarionwater.com/watering. We'll also suggest many other steps you can take to help ensure that your community always has enough water available for its critical needs.

Imagine a Day Without Water

October 20, 2022

Across the U.S., the news continues to be full of stories about water scarcity, whether in rain-starved forests, parched farmlands or shrinking lakes and rivers.

Here in the Northeast, rainfall has been relatively scarce, especially the long, gentle kind needed to soak through the soils and fill groundwater and reservoirs.

Society's need for water is well worth thinking about and doing all that's possible to conserve the water we use. To encourage that, Aquarion is joining

other water utilities throughout the country in designating October 20, 2022 as a special day to "Imagine a Day Without Water."

What do you think life would be like without easily accessible water? What would you drink? What would you bathe, clean and garden with? How would farmers irrigate the food you rely on? How would countless businesses make their products and provide their services?

Make October 20 a day to consider what your home and community would be like without water. Bring family, friends, and co-workers into the conversation. And be sure to tap into aquarionwater.com/conserve. You'll find a variety of tips on how you can use water more efficiently.
