

Abenaki Water Company

Water Supply Update

Serving the Communities of Belmont, Bow and Gilford

Weather Trends/Outlook

Despite precipitation in September being close to normal; 3.0 inches compared to an average of 2.9 inches, the region is currently in a Severe Drought condition (see the U.S. Drought Monitor map below). Reportedly, this is the worst drought in 130 years.

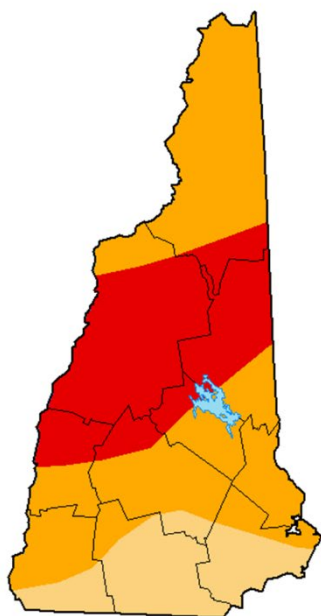

There are no water use restrictions currently in place for Abenaki's customers yet residents are encouraged to use water conservatively. Less demand over the winter will help local aquifers recharge thereby lowering the probability of water use restrictions next spring and summer.

U.S. Drought Monitor New Hampshire

September 30, 2025
