Your water has been tested for more than 100 compounds that are important to public health. The maximum number of compounds detected was 14, all of which were below the amounts allowed by state and federal law. Most of these compounds are naturally occurring. Monitoring frequency varies from daily to once every nine years per EPA regulation, depending on the parameter. Our testing encompasses the full range of regulated inorganic, organic and radiological compounds, and microbiological and physical parameters. Results shown below are for detected compounds only.

## FOOTNOTES AND DEFINITIONS

for water quality table on previous page

**AL Action Level:** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

### CU Color Units

**MCL Maximum Contaminant Level:** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**MCLG Maximum Contaminant Level Goal:** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

### NA Not Applicable

**NL** State of Connecticut customer notification level

**NTU Nephelometric Turbidity Units,** a measure of the presence of particles. Low turbidity is an indicator of high-quality water.

**ppb parts per billion,** or micrograms per liter (ug/L)

**ppm parts per million,** or milligrams per liter (mg/L)

**SMCL Secondary Maximum Contaminant Level**

\* 90th percentile value in copper monitoring. Result is representative of customer sampling stagnant water. No locations exceeded the action level for copper.

\*\* 90th percentile value in lead monitoring. Result is representative of customer sampling stagnant water. No locations exceeded the action level for lead.

^ Measured at representative locations within the distribution system.

## Understanding Your Water Quality Table

**Barium:** Erosion of natural deposits.

**Copper:** Corrosion of household plumbing systems.

**Fluoride:** Erosion of natural deposits.

**Lead:** Corrosion of household plumbing systems.

**Nitrate:** Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits.

**Chlorine:** Water additive used to control microbes.

**Total Trihalomethanes:** By-product of drinking water chlorination.

**Total Haloacetic Acids:** By-product of drinking water chlorination.

**Color:** Natural organic matter such as decaying leaves; naturally occurring iron and manganese.

**pH:** Naturally occurring.

**Turbidity:** Sediment particles; naturally occurring iron and manganese; soil runoff.

**Chloride:** Naturally present in the environment.

**Sodium:** Use of road salt; naturally present in the environment.

**Sulfate:** Naturally present in the environment.
